Use Case: Assign tasks to group members

- Preconditions: The user is a member of a group and wants to assign a task to another group member.
- Main flow:
    1. The user accesses the task management feature.
    2. The user browse the list of available tasks.
    3. The user selects the task to see the task details.
    4. For the selected task, the user can view the list of assigned group members. In the beginning, there is no assigned group members because a new task has not been assigned to any group member yet.
    5. To assign group member(s) to the task:
        - The user click a button to view a list of all group members.
        - The user select the group member(s) from the list and press a button to assign the selected group member(s) to the task.
    6. The system updates the task assignment and notifies the assigned group member(s).
- Post-conditions: The task is successfully assigned to the selected group member(s), and they receive a notification about the assignment.
